

Lead Free/ RoHS Compliance

Fotofab respectfully submits the following information regarding the Lead free/RoHS compliance of the parts manufactured by Fotofabrication Corporation:

- Fotofab manufactures parts which are designed entirely by its customers. Fotofab does not review any designs for compliance with RoHS directives or for compliance with any international standards. If your designs are compliant the finished parts will be.
- We do not add any mercury, lead, hexavalent chromium, polybrominated biphenyls, or polybrominated diphenyl ethers to the base materials, nor do we use any of these chemicals during processing unless required by some feature of your design.
- We have well over 1,000 active customers most of whom purchase multiple part numbers, we cannot fill out surveys specific to each customer and each part number which we manufacture. As stated above, if your designs are RoHS compliant, your parts will be.

We thank you for your understanding and for your continued business.

Many regards

Jamie Howton
President
